

ASFP-10G-ZR DATASHEET

# Alpha Bridge SFP ASFP-10G-ZR Datasheet

#### • Features

- Compliant to SFF-8431 specifications for enhanced 8.5 and 10 Gigabit small form factor pluggable module "SFP+"
- 1550nm cooled EML transmitter with TEC, APD photodetector
- 2-wire interface for management specifications compliant with SFF 8472 digital diagnostic monitoring interface for optical transceivers
- Operating case temperature: 0 to 70 °C
- All-metal housing for superior EMI performance
- Low power consumption, less than 1.8W
- Advanced firmware allow customer system encryption information to be stored in transceiver
- Cost effective SFP+ solution, enables higher port densities and greater bandwidth

# **RoHS compliant**

Applications

•

- 10GBASE-ZR/ZW
- 10GBASE-ZR/ZW + FEC
- 10G Storage system

#### **Absolute Maximum Ratings**

| Parameter                     | Symbol | Min. | Max. | Units | Note |
|-------------------------------|--------|------|------|-------|------|
| Storage Temperature           | $T_c$  | -40  | 85   | °C    |      |
| Operating Case<br>Temperature | Тс     | 0    | 70   | °C    |      |
| Supply Voltage                | Vcc    | 0    | 3.6  | V     |      |
| Relative Humidity             | RH     | 5    | 95   | %     |      |
| RX Input Average Power        | Pmax   |      | -1   | dBm   |      |

#### **Recommended Operating Conditions**

| Parameter      | Symbol | Min.  | Max.  | Units | Note |
|----------------|--------|-------|-------|-------|------|
| Case Operating | T      |       | 70    | °C    |      |
| Temperature    | Tc     | 0     | 70    | C     |      |
| Supply Voltage | Vcc    | 3.135 | 3.465 | V     |      |
| Supply Current | ICC    |       | 520   | mA    |      |

#### Diagnostics

| Parameter    | Symbol | Accuracy           | Unit | Notes                 |
|--------------|--------|--------------------|------|-----------------------|
| Temperature  | Temp   | ± 3                | οC   | Over operating Temp   |
| Voltage      | VCC    | ± 0.1              | V    | Full operating range  |
| Bias Current | Bias   | ± 10               | mA   |                       |
| TX Power     | TX     | $\pm 3 \text{ dB}$ | dBm  |                       |
| RX Power     | RX     | $\pm 3 \text{ dB}$ | dBm  | -1dBm to -15dBm range |

### **Transmitter Electro-optical Characteristics**

# Vcc = 3.135 V to 3.465 V, TC = 0 $\Box$ C to 70 $\Box$ C

| Parameter                                | Symbol | Min. | Тур.    | Max.    | Units | Note |
|--|--------|------|---------|---------|-------|------|
| Center Wavelength                        | λC     | 1530 |         | 1565    | nm    |      |
| Side Mode Suppression Ratio              | SMSR   | 30   |         |         | dB    |      |
| Output Optical Power                     | Pout   |      |         | 4       | dBm   |      |

| Data Input Total Jitter                  | TJ     |      |         | 0.28    | UI    |      |

Note 1: : Path penalty is intended as the power penalty of the interface between back-to-back and the maximum applied dispersion

#### **Receiver Electro-optical Characteristics**

# *Vcc* = 3.135 V to 3.465 V, $T_{\rm C}$ = 0 $^{\Box}$ C to 70 $^{\Box}$ C

| Parameter                                     | Symbol | Min. | Тур. | Max. | Units | Note |
|---|--------|------|------|------|-------|------|
| Operating Center Wavelength                   | λC     | 1250 |      | 1620 | nm    |      |
| Receiver Overload                             |        | -7   |      |      | dBm   |      |
| Receiver Sensitivity                          | RSEN   |      |      | -24  | dBm   | 1    |
| Receiver Reflectance                          | Rf     |      |      | 26   | dB    |      |
| Loss of Asserted                              | LOSA   | -40  |      |      | dBm   |      |
| LOS De-assert                                 | LOSD   |      |      | -24  | dBm   |      |
| LOS Hysteresis                                |        | 0.5  |      |      | dB    |      |
| Stressed eye Jitter                           |        | 0.3  |      |      | UI    | 1    |
| Receive electrical 3dB upper cutoff frequency |        |      |      | 12.3 | GHz   |      |
| Receiver power damage                         |        |      |      | 1    | dBm   |      |
| Single Ended Output Voltage Tolerance         |        | -0.3 |      | 4    | V     |      |

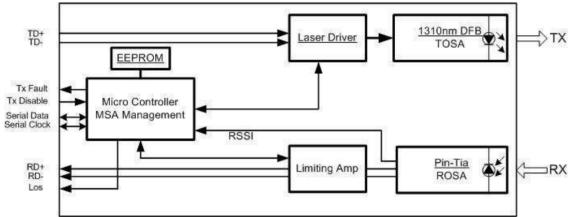

| RX Output Diff Voltage       | Vo    | 300 | 850  | mV |            |
|------------------------------|-------|-----|------|----|------------|
| RX Output Rise and Fall Time | Tr/Tf | 30  |      | ps | 20% to 80% |
| Total Jitter                 | TJ    |     | 0.7  | UI |            |
| Deterministic Jitter         | DJ    |     | 0.42 | UI |            |

rNote 1: Average optical power shall be measured using the methods specified in TIA/EIA-455-95.

Note 2: Receiver sensitivity is informative. Stressed receiver sensitivity shall be measured with conformance test signal for BER =1x 10-12.

Note 3. Vertical eye closure penalty and stressed eye jitter are the test conditions for measuring stressed receiver sensitivity. They are not the required characteristic of the receive

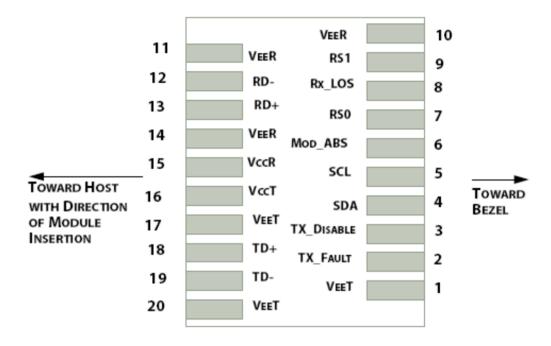

#### Block Diagram of Transceiver

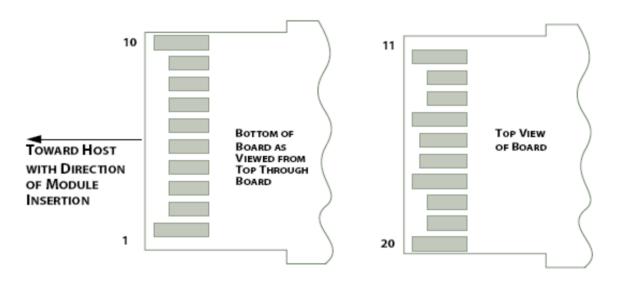

The SFP+ ER module electrical interface is compliant to SFI electrical specifications. The transmitter input and receiver output impedance is 100 Ohms differential. Data lines are internally AC coupled. The module provides differential termination and reduce differential to common mode conversion for guality signal termination and low EMI. SFI typically operates over 200 mm of improved FR4 material or up to about 150mmof standard FR4 with one connector. The transmitter converts 10Gbit/s serial PECL or CML electrical data into serial optical data compliant with the 10GBASE-LR standard. An open collector compatible Transmit Disable (Tx Dis) is provided. Logic "1," or no connection on this pin will disable the laser from transmitting. Logic "0" on this pin provides normal operation. The transmitter has an internal automatic power control loop (APC) to ensure constant optical power output across supply voltage and temperature variations. An open collector compatible Transmit Fault (Tx\_Fault) is provided. TX\_Fault is a module output contact that when high, indicates that the module transmitter has detected a fault condition related to laser operation or safety. The TX Fault output contact is an open drain/collector and shall be pulled up to the Vcc Host in the host with a resistor in the range 4.7-10 k $\Omega$ . TX Disable is a module input contact. When TX Disable is asserted high or left open, the SFP+ module transmitter output shall be turned off. This contact shall be pulled up to VccT with a 4.7 k $\Omega$  to 10 k $\Omega$ resistor The receiver converts 10Gbit/s serial optical data into serial PECL/CML electrical data. An open collector compatible Loss of Signal is provided. Rx LOS when high indicates an optical signal level below that specified in the relevant standard. The Rx\_LOS contact is an open drain/collector output and shall be pulled up to Vcc\_Host in the host with a resistor in the range 4.7-10 k $\Omega$ , or with an active termination. Power supply filtering is recommended for both the transmitter and receiver. The Rx\_LOS signal is intended as a preliminary indication to the system in which the SFP+ is installed that the received signal strength is below the specified range. Such an indication typically points to noninstalled cables, broken cables, or a disabled, failing or a powered off transmitter at the far end of the cable

| 19 | CML-I     | TD-      | Transmitter Inverted Data Input                         |   |
| 20 |           | VeeT     | Module Transmitter Ground                               | 1 |

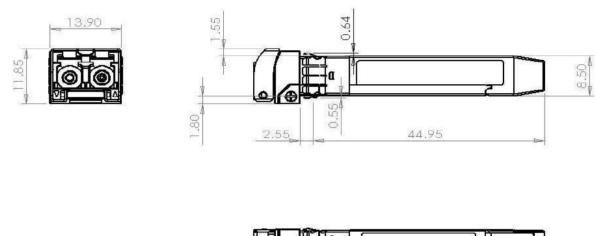

#### Note:

- 1. Module ground pins GND are isolated from the module case.
- 2. Shall be pulled up with  $4.7K-10K\Omega$  to a voltage between 3.15V and 3.45V on the host board.
- 3. This contact is an open collector/drain output contact and shall be pulled up on the host board.
- 4. Tx\_Disable is an input contact with a  $4.7k\Omega$  to  $10k\Omega$  pull up to VccT inside the module.

#### Dimensions

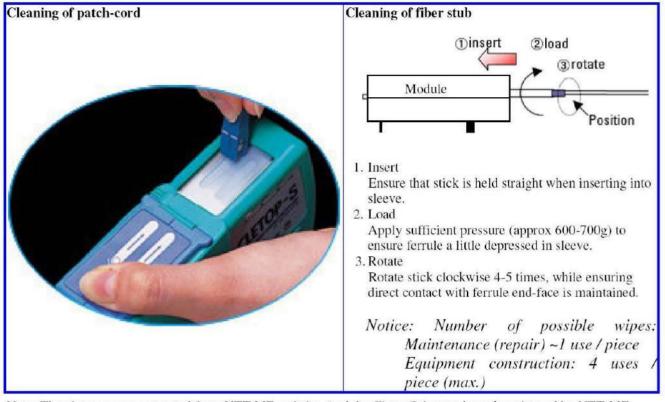

#### **Optical Receptacle Cleaning Recommendations:**

All fiber stubs inside the receptacle portions were cleaned before shipment. In the event of contamination of the optical ports, the recommended cleaning process is the use of forced nitrogen. If contamination is thought to have remained, the optical ports can be cleaned using a NTT international Cletop® stick type and HFE7100 cleaning fluid. Before the mating of patch-cord, the fiber end should be cleaned up by using Cletop® cleaning cassette.

Note: The pictures were extracted from NTT-ME website. And the Cletop® is a trademark registered by NTT-ME
