Alpha Bridge
AQSFP-40G-SR4
Datasheet

Alpha Bridge Technologies

Features

- 4 independent full-duplex channels
- Up to 11.2Gb/s data rate per channel
- MTP/MPO optical connector
- QSFP+ MSA compliant
- Digital diagnostic capabilities
- Up to 100m transmission on OM3 multi- mode ribbon fiber
- CML compatible electrical I/O
- Single +3.3V power supply
- Operating case temperature: 0 to 70oC
- XLPPI electric interface
- Maximum power consumption 1.5W
- RoHS-6 compliant

Application

- Rack to Rack
- Data Center
- Infiniband QDR, DDR and SDR
- 40G Ethernet

Absolute Maximum Ratings

Parameter	Symbol	Min.	Max.	Units
Storage Temperature	Ts	-40	85	°C
Power Supply Voltage	Vcc	-0.3	4	V
Relative Humidity	RH	5	95	%
Signal Input Voltage	V_{cc}	-0.3	+0.3	V
Receive Input Optical Power (Damage Threshold)	P_{DMG}		5.0	dBm

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Units
Operating Temperature	Topc	0		70	℃
Power Supply Voltage	Vcc	3.1	3.3	3.465	V
Data Rate, each Lane			10.3125	11.2	Gb/s
Control Input Voltage High		2		Vcc	V
Control Input Voltage Low		0		0.8	V
Link Distance (OM3)	D			100	m

Diagnostics Monitoring

Parameter	Symbol	Accuracy	Units	Notes
Temperature monitor absolute error	DMI_Temp	±3	℃	Over operating temperature range
Supply voltage monitor absolute error	DMI _VCC	±0.1	V	Over full operating range
Channel RX power monitor absolute	DMI_RX_Ch	±2	dB	1
Channel Bias current monitor	DMI_Ibias_Ch	±10%	mA	Ch1~Ch4
Channel TX power monitor absolute error	DMI_TX_Ch	±2	dB	

Notes: 1. Due to measurement accuracy of different single mode fibers, there could be an additional +/-1 dB fluctuation, or a +/- 3 dB total accuracy.

Transmitter Electro-optical Characteristics

Parameter	Symbol	Min	Type	Max	Units	Notes
Power Consumption				1.5	W	
Supply Current	ICC			450	mA	
Transceiver Power-on Initialization Time				2000	ms	1
						Referred to
		-0.3		4.0	V	TP1 signal
						common

AC Common Mode Input Voltage Tolerance		15			mV	RMS
Differential Input Voltage Swing Threshold		50			mVpp	LOSA Threshold
Differential Input Voltage Swing	Vin,pp	180		1200	mVpp	
Differential Input Impedance	Zin	90	100	110	Ohm	
Differential Input Return Loss		See IEEE 802.3ba		86A.4.11	dB	10MHz-11.1GHz
J2 Jitter Tolerance	Jt2	0.17			UI	
J9 Jitter Tolerance	Jt9	0.29			UI	
Data Dependent Pulse Width Shrinkage (DDPWS) Tolerance		0.07			UI	
Eye Mask Coordinates {X1,X2, Y1, Y2}		0.11, 0.31 95, 35			UI	Hit Ratio=$5*10^{-5}$

High Speed Electrical Specifications

Center Wavelength	λc	840	850	860	nm	
RMS Spectral Width	$\triangle\lambda rms$		0.5	0.65	Nm	
Average Launch Power, each Lane	PAVG	-7.6		1.0	dBm	3
Optical Modulation Amplitude (OMA) each Lane	POMA	-5.6		3.0	dBm	4
Difference in Launch Power between any Two Lanes (OMA)	Ptx,diff			4.0	dB	
Peak Power, each Lane	PPT			4.0	dBm	
Launch Power in OMA minus Transmitter and Dispersion Penalty (TDP), each Lane		-6.5			dBm	
TDP, each Lane				3.5	dB	
Extinction Ratio	ER	3.0			dB	
Relative Intensity Noise	RIN			-128	dB/Hz	12dB reflection
Optical Return Loss Tolerance	TOL			12	dB	
Encircled Flux	$\geq$ 86% at 19um, $\leq$ 30% at 4.5um					

Transmitter Eye Mask Definition {X1, X2, X3, Y1, Y2, Y3}	0.23, 0.34, 0.43, 0.27, 0.35, 0.4		
Average Launch Power OFF Transmitter, each Lane	Poff	-30	dBm

Notes: 1.
Power-on Initialization Time is the time from when the power supply voltages reach and remain above the minimum recommended operating supply voltages to the time when the module is fully functional. 2. The single ended input voltage tolerance is the allowable range of the instantaneous input signals. 3. The maximum transmitter average optical power of 1.0 dBm is well within the guardband of receiver overload specifications of commercially available 10GBASE-SR SFP+ transceivers. 4. Even if the TDP < 0.9 dB, the OMA min must exceed the minimum value specified here

Optical Transmitter Characteristics

Parameter	Test Point	Min	Typ.	Max	Units	Notes
Signaling Rate, Each Lane			25.78125		Gbps	
	L0	1294.53	1295.56	1296.59	nm	
	L1	1299.02	1300.05	1301.09	nm	
	L2	1303.54	1304.58	1305.63	nm	
	L3	1308.09	1309.14	1310.19	nm	
Rate Tolerance		-100		100	ppm	From normal rate
Side-mode Suppression Ratio	SMSR	30			dB	
Total Launch Power				10.5	dBm	
Average Launch Power,Each Lane	Pavg	-4.3		4.5	dBm	
Extinction Ratio	ER	4			dB	
Optical Modulation Amplitude, Each Lane	OMA	1.3		4.5	dBm	
Difference in Launch Power between Any Two Lanes	OMA			5	dB	
Transmitter and Dispersion Penalty, Each Lane	TDP			2.2	dB	
Average Launch Power of OFF Transmitter, Each Lane				-30	dBm	
Relative Intensity Noise	RIN20O MA			-130	dB/H$_z$	
Transmitter Reflectance				-12	dB	

Transmitter Eye Mask {X1, X2, X3, Y1, Y2, Y3}	0.25, 0.4, 0.45, 0.25, 0.28, 0.4}		

Receiver Electro-optical Characteristics

Parameter	Symbol	Min	Type	Max	Units	Notes
Single-ended Output Voltage		-0.3		4.0	V	Referred to signal common
AC Common Mode Output Voltage				7.5	mV	RMS
Differential Output Voltage Swing	Vout,pp	600		800	mVpp	
Differential Output Impedance	Zout	90	100	110	Ohm	
Termination Mismatch at 1MHz				5	%	
Differential Output Return Loss		See IEEE 802.3ba 86A.4.2.1			dB	10MHz-11.1GHz
Common Mode Output Return Loss		See IEEE 802.3ba 86A.4.2.2			dB	10MHz-11.1GHz
Output Transition Time		28			ps	20% to 80%
J2 Jitter Output	Jo2			0.42	UI	
J9 Jitter Output	Jo9			0.65	UI	
Eye Mask Coordinates {X1, X2 Y1, Y2}			0.29, 0.5		UI	Hit Ratio = 5×10^{-5}
			150, 425		mV	
Center Wavelength	Λc	840	850	860	nm	
Damage Threshold, each Lane	THd	3.4			dBm	1
Average Receive Power, each Lane		-9.5		2.4	dBm	
Receiver Reflectance	RR			-12	dB	
Receive Power (OMA), each Lane				3.0	dBm	
Receiver Sensitivity (OMA), each Lane	SEN			-8.4	dBm	
Stressed Receiver Sensitivity (OMA), each Lane				5.4	dBm	2
Peak Power, each Lane	PPR			4.0	dBm	
LOS Assert	LOSA	-30			dBm	
LOS Deassert	LOSD			-12	dBm	

LOS Hysteresis	LOSH	0.5		dB
Conditions of Stress Receiver Sensitivity Test (Note 3)				
Vertical Eye Closure Penalty, each Lane	1.9		dB	
Stressed Eye J2 Jitter, each Lane	0.3		UI	
Stressed Eye J9 Jitter, each Lane	0.47		UI	
OMA of each aggressor lane	0.4		dBm	

Notes:

1. The receiver shall be able to tolerate, without damage, continuous exposure to a modulated optical input signal having this power level on one lane. The receiver does not have to operate correctly at this input power.

2. Measured with conformance test signal at receiver input for BER = 1×10^{-12}.

3. Vertical eye closure penalty and stressed eye jitter are test conditions for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

Block Diagram of Transceiver
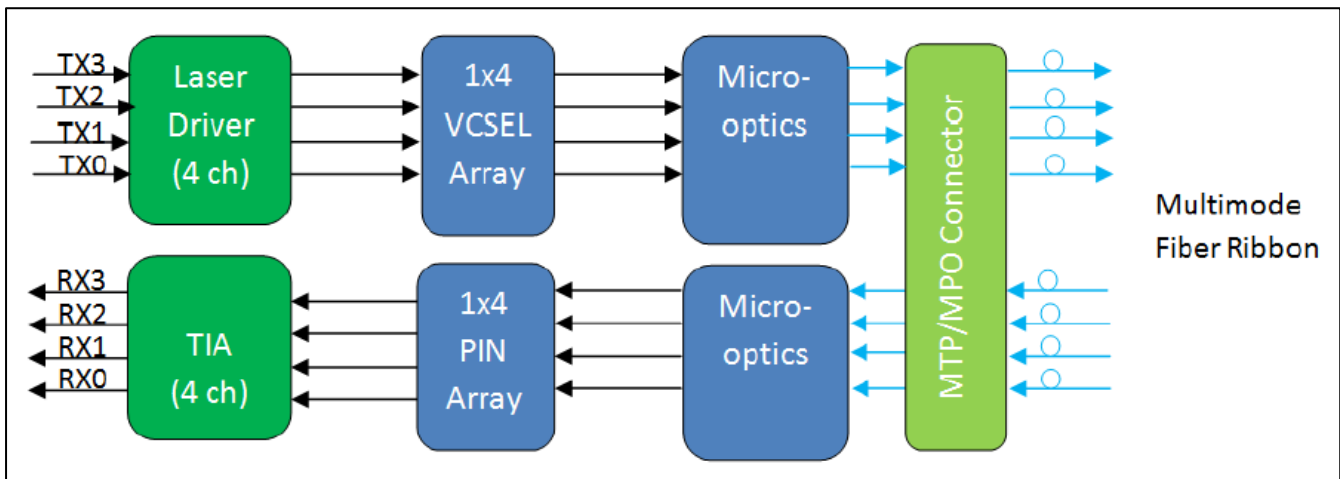

The OPCS-MX1-85-CB converts parallel electrical input signals into parallel optical signals, by a driven Vertical Cavity Surface Emitting Laser (VCSEL) array. The transmitter module accepts electrical input signals compatible with Common Mode Logic (CML) levels. All input data signals are differential and internally terminated. The receiver module converts parallel optical input signals via a photo detector array into parallel electrical output signals. The receiver module outputs electrical signals are also voltage compatible with Common Mode Logic (CML) levels. All data signals are differential and support a data rates up to 10 Gbps per channel. Figure 1 shows the functional block diagram of the OPCS-MX1-85-CB QSFP Transceiver.

A single +3.3V power supply is required to power up the module. Both power supply pins VccTx and VccRx are internally connected and should be applied concurrently. As per MSA specifications the module offers 7 low speed hardware control pins (including the 2-wire serial interface): ModSelL, SCL, SDA, ResetL, LPMode, ModPrsL and Int

Module Select (ModSelL) is an input pin. When held low by the host, the module responds to 2-wire serial communication commands. The ModSelL allows the use of multiple QSFP modules on a single 2-wire interface bus – individual ModSelL lines for each QSFP module must be used.Serial Clock (SCL) and Serial Data (SDA) are required for the 2-wire serial bus communication interface and enablethe host to access the QSFP memory map.
The ResetL pin enables a complete module reset, returning module settings to their default state, when a low levelon the ResetL pin is held for longer than the minimum pulse length. During the execution of a reset the host shall disregard all status bits until the module indicates a completion of the reset interrupt. The module indicates this byposting an IntL (Interrupt) signal with the Data_Not_Ready bit negated in the memory map. Note that on power up(including hot insertion) the module should post this completion of reset interrupt without requiring a reset.

Low Power Mode (LPMode) pin is used to set the maximum power consumption for the module in order to protecthosts that are not capable of cooling higher power modules, should such modules be accidentally inserted.

Module Present (ModPrsL) is a signal local to the host board which, in the absence of a module, is normally pulledup to the host Vcc. When a module is inserted into the connector, it completes the path to ground though a resistoron the host board and asserts the signal. ModPrsL then indicates a module is present by setting ModPrsL to a "Low" state.

Interrupt (IntL) is an output pin. When "Low", it indicates a possible module operational fault or a status critical to the host system. The host identifies the source of the interrupt using the 2-wire serial interface. The IntL pin is an open collector output and must be pulled to the Host Vcc voltage on the Host board.

Pin Assignment

Dimensions

Optical Receptacle Cleaning Recommendations:

All fiber stubs inside the receptacle portions were cleaned before shipment. In the event of contamination of the optical ports, the recommended cleaning process is the use of forced nitrogen. If contamination is thought to have remained, the optical ports can be cleaned using a NTT international Cletop® stick type and HFE7100 cleaning fluid. Before the mating of patch-cord, the fiber end should be cleaned up by using Cletop® cleaning cassette

Cleaning of patch-cord

Cleaning of fiber stub

① insert   ② load
③ rotate
Module
Position

1. Insert
   Ensure that stick is held straight when inserting into sleeve.
2. Load
   Apply sufficient pressure (approx 600-700g) to ensure ferrule a little depressed in sleeve.
3. Rotate
   Rotate stick clockwise 4-5 times, while ensuring direct contact with ferrule end-face is maintained.

Notice: Number of possible wipes:
Maintenance (repair) ~1 use / piece
Equipment construction: 4 uses / piece (max.)

Note: The pictures were extracted from NTT-ME website. And the Cletop® is a trademark registered by NTT-ME
